

Instructions for incorporating subscripts and superscripts

New this year: In the body of your abstract, we will accept superscripts and subscripts with the following commands:

For a single-character superscript, enter $\n so that b^2 would be entered as $b\2

For a single-character subscript, enter $\$_n$, so that H_2O would be entered as $H\$_2O$

For multiple-character subscripts or superscripts, use parentheses around the subscripted or superscripted characters. For example, $C_{18}H_{38}$ should be entered as $C\$_(18)H\$_(38)$; ^{14}C would be $\$^(14)C$.
